
Otocheck 2.00 is a software program that can be used to determine the key factor for a specific website. It is very useful in determining and confirming if a website has been compromised and has been put on servers which can be traced by law enforcement or other government agencies. More information on this software can be found in the article below: <https://www.ntsecuritytrainer.com/otocheck-2-00-keygens/>. This article will give you full details of the different aspects of the usage of Otocheck 2.00 and how it can be used to find out if a website has been compromised. Otocheck 2.00 is mainly used by the following law enforcement agencies: The US Federal Bureau of Investigation The United Kingdom's National Cyber Crime Unit, or GCHQ [British intelligence service] [1] [2] [3].

"It is important to note that the cryptographic keys used in Otocheck 2.00 are not of a very high level and should only be used to determine if a website has been compromised, but not for use in network traffic analysis." - NIST Special Publication 800-90B (https://www.ntstc.edu/downloads/SP800-90B_NSTC_NCCoE_Otocheck_Dec2006.pdf) "The National Security Agency (NSA) has a wide range of cryptanalytic capabilities for use against cryptographic systems. These capabilities include cryptanalysis, traffic analysis, and other tools to find covert channels in communications systems. NSA's main focus has been on countering cryptography used to protect classified national security information that has been or will be processed by computers, including those used by the U.S. Government and military." - The United States Department of Defense (https://www.dodig.mil/pubs/files/DoD_CII_Doctrine_2009.pdf) "The work of the Cyber Crime Unit is central to the Government's fight against cyber crime, including both traditional criminal activity facilitated by the use of computers and the new threat from organized criminals. The unit works closely with international partners, providing support to police forces at home and abroad to help them tackle cross-border cyber offences. It also works with industry through its eCrime liaison officers network, providing specialized expertise in order to help businesses reduce their vulnerability to attacks." - GCHQ (<https://www.gchq.gov.uk/>) Otocheck 2.00 has been used in court cases to prove if a website has been compromised. The following court cases have taken place due to the evidence produced by Otocheck 2.0's https://www.ntstc.edu/downloads/SP800-90B_NSTC_NCCoE_Otocheck_Dec2006.pdf
